# BAT Cheatsheet

# Using FOR command to extract PID from TASKLIST

Put this in a .bat file, and you could use it like that:

BAT\_FILE.bat <PROCESS\_NAME> <COMMAND>

```
“ for /F "tokens=2,* delims=" %i IN ('tasklist ^| findstr %1') DO  
  <MY_COMMAND> %i %2
```

This is useful when writing an injector, and looking to inject to a specific process by its name, for example:

```
“ Replace MY_COMMAND with something like inject.exe, which will inject  
  depending on a provided file path  
  BAT_FILE.bat notepad.exe my_library.dll
```
